Deep Dive: Proof OLS Regression

Learning goals

 Understand analytical derivation of OLS estimator for LM

ANALYTICAL OPTIMIZATION

• Special property of LM with L2 loss: analytical solution available

$$egin{aligned} \hat{m{ heta}} \in rg\min_{m{ heta}} \mathcal{R}_{\mathsf{emp}}(m{ heta}) &= rg\min_{m{ heta}} \sum_{i=1}^n \left(m{y}^{(i)} - m{ heta}^{ op} m{\mathbf{x}}^{(i)}
ight)^2 \ &= rg\min_{m{ heta}} \|m{y} - m{X}m{ heta}\|_2^2 \end{aligned}$$

Find via normal equations

$$rac{\partial \mathcal{R}_{\mathsf{emp}}(oldsymbol{ heta})}{\partial oldsymbol{ heta}} = \mathbf{0}$$

Solution: ordinary-least-squares (OLS) estimator

$$\hat{\boldsymbol{\theta}} = (\mathbf{X}^{\top}\mathbf{X})^{-1}\mathbf{X}^{\top}\mathbf{y}$$

ANALYTICAL OPTIMIZATION – PROOF

 $0 = \frac{\partial \mathcal{R}_{emp}(\theta)}{\partial \theta} \text{ (sum notation)}$
